Summary

Flutter Developer with a strong academic background (GPA 3.73, ranked 4th) and hands-on experience building and shipping Android applications to Google Play. Skilled in Clean Architecture, BLoC, Firebase, and REST APIs, with practical experience integrating payment gateways. Active Flutter content creator with 42+ videos and 22K+ views on YouTube, passionate about building production-ready apps and sharing knowledge with the community.

Skills

- OOP | RESTful APIs | Design Pattern | MVVM | Clean Architecture | Clean Code | Git | Github | Solid Principles | Dart | Firebase
- Problem Solving | Flutter Development | UI/UX | BLoC | Cubit | MVVM | Responsive UI Development | Payment Gateway Integration
- Teaching and Instruction | Communication Skills | Data Structures | Agile Methodologies | English

Education

Bachelor of Computer Science	<u>Nahda University</u>	Egypt	2020- 2024
-------------------------------------	--------------------------------	--------------	-------------------

- Major in Computer Science with Graduation Date: **February 2024**, GPA : **3.73**, Ranked 4th among classmates

Work History

YouTuber	<u>YouTube</u>	04/2024 - Present
-----------------	-----------------------	--------------------------

- Created and released over 42 Flutter development videos with over 22k views.
- Building apps and giving tips&tricks for Flutter Community who consistently engaged with and interacted with the content

Flutter Developer	<u>Homy Egypt</u>	Freelance	10/2023 - Present
--------------------------	--------------------------	------------------	--------------------------

- Developed and maintained 18+ Flutter applications across education, business management, accounting, and service industries.
- Built scalable mobile applications using Flutter, Clean Architecture, BLoC/Cubit, and RESTful APIs.
- Integrated Firebase services, authentication systems, and payment gateways including Paymob.
- Collaborated with clients to gather requirements and deliver tailored, high-quality solutions.
- Optimized application performance and maintained clean, reusable, and scalable codebases.

Projects

- **Elebdaa:** Mathematics Educational Platform (Android)

Developed an educational platform focused on mathematics for middle and high school students. The platform features account registration and login functionality, along with a profile section, document content, video content, and a "Contact Us" feature to enhance user interaction and support.

[Available on Google Play](#)

- **Attendance Zone:** Students Attendance App (mobile & desktop)

Developed a comprehensive attendance management system consisting of a mobile app for students and a desktop app for faculty members, enhancing the accuracy and convenience of attendance tracking in an academic environment.

[App Video](#)

- **MedMisr Direct:** (Android)

Integrated Paymob payment gateway, handling end-to-end payment flow across **3+ transaction types** with full error handling to enable secure online transactions. Implemented end-to-end payment flow including checkout, transaction handling, and response validation, enhanced user experience by providing seamless digital payment for medical services. Worked with REST APIs and handled error states & edge cases in payment processing.

[Available on Google Play](#)

- **El Malak Church:** Church Management System (Android)

Developed a comprehensive church management system for Elmalak Church, designed to manage all church-related data and provide the ability to extract detailed reports for each section in Excel format.

[App Video](#)

- **Dafter:** Application for an Accounting Office (Android)

In the "Dafter" project, I developed an application for an accounting office, used by the accountant and assistants, to streamline client and document management. The application allows for adding new clients and securely storing their documents, efficiently searching for clients, displaying those who owe taxes or haven't completed their required documentation, and accurately managing financial values within the

system. This project enhances the efficiency of processing financial and document-related tasks for the accounting team.

- **Easy Bio: Biology Educational Platform (Android)**

Developed an educational platform using Flutter and integrated APIs. The platform includes user authentication with a login system and a navigation bar with four main sections: Profile, Contact Us, Visit Website, and Purchased Videos. Utilized the BLoC pattern to manage state effectively across the application, ensuring a smooth user experience with intuitive navigation and responsive design.

[Available on Google Play](#)

- **Mikrotik Manager: Network Monitoring & MikroTik Management App**

Developed a Flutter-based mobile application for real-time MikroTik network monitoring and management. Implemented device health tracking with automated ping checks, instant outage notifications, and rogue DHCP detection to help network administrators proactively identify and resolve issues.

[App Video](#)

- **My Network — Network Manager App (Android)**

Developed a Flutter-based mobile application for real-time MikroTik network monitoring and management. Implemented device health tracking with automated ping checks, instant outage notifications, and rogue DHCP detection to help network administrators proactively identify and resolve issues.
